

FEATURE EXHIBITION

Our Climate Quest: Small Steps to Big Change

This exhibition features a variety of fun games and interactive activities centred on climate change. Young visitors are invited into a bright, pleasant setting where they explore different ways they can protect nature and become true defenders of the environment!

Once they complete their exploration, they can gather for the immersive and interactive *Climate Action Show* where they help the action unfold by making choices on touchscreen tablets.

6+ Exhibition recommended for children aged 6 and up. The contents of *Our Climate Quest* are focused on accessible climate actions, but some interactive stations may cause some visitors to feel some anxiety. Most interactive stations are accessible for visitors with limited mobility.

Notes for companions

The hall has a single point of access used to enter and exit the exhibition. Once inside the hall, visitors are free to roam as they please. Visitors can leave the exhibition hall at any time.

There are a fair number of dividers making it sometimes difficult to keep a direct line of sight on the visitors you are accompanying.

Natural light fills the exhibition hall, so the level of brightness can vary depending on weather and time of day.
