

CHARTER - OUR COMMITMENT TO ACCESSIBILITY

This charter sets forth the Old Port of Montréal Corporation (OPMC)'s engagement towards social responsibility. It attests to our commitment to pursue our activities in such a way that is always increasingly **accessible** while striving to strike a balance between social impact, environmental stewardship, and financial resilience.

OUR APPROACH

Our commitment to social responsibility was subject to a strategic planning process which involved an organizational audit that allowed us to assess how environment, accessibility, and equity, diversity and inclusion are embedded in our management practices and organizational model and to identify the issues to be addressed to pursue progress and improve overall performance. A governance structure, that includes three specific action plan implementation committees, was also put in place to help steer and efficiently implement our strategy over the coming years.

The Old Port of Montréal manages and develops a lively cultural and urban recreational tourism site where activities and discoveries abound.

STRATEGIC STATEMENT

Through the strategic development of its programming and a sustained approach to its land site planning: offer Canadians an authentic site anchored in its community where each experience is made memorable; and take leadership in socially responsible practices.

The Montréal Science Centre provides each visitor with opportunities to learn how to use science and technology to build their future.

STRATEGIC STATEMENT

Through the development of bold and innovative programming, supported by a vast community in science and technology: awake Canadians to current and future issues; and take leadership in socially responsible practices.

OUR ACCESSIBILITY TARGETS

The following targets were adopted in view of achieving our vision of accessibility:

Target 1 : Implementing policies, procedures, and initiatives that allow for equitable and accessible employment opportunities at all stages of the employment cycle.

Target 2 : Design built environments as well as newly built and renovated public spaces in a way that is mindful of preventing and eliminating barriers for all users.

Target 3 : Train our teams and apply accessibility standards to the Corporation's information technologies and communications.

Target 4 : Ensure public-facing information and communications are made accessible, equally in terms of signage, websites, and other platforms and means of communication.

Target 5 : Fold accessibility principles into all requirements tied to the acquisition of assets, services, and installations.

Target 6 : Uphold guiding principles and follow best practices in the design and operation of programs and services.

OUR VISION OF ACCESSIBILITY FOR 2030

In 2030, consulting with our internal and external stakeholders is an integral part of our management approach. Both are consulted to help guide the Old Port's and the Science Centre's strategic or innovation decisions. The ongoing engagement of these stakeholders gives credence to the exemplariness that we strive for in our actions and choices.

Among our priorities is the accessibility of all our installations and of all our communications. The multiplicity of efforts that were deployed allowed us to drastically reduce the barriers and obstacles that once confronted those with disabilities.

Lastly, and jointly with our partners, we promote knowledge-sharing and education by offering our audiences programming, activities, and events that take on today's social and environmental issues. We are a source of inspiration for Canadian institutions.

SCOPE AND OBLIGATIONS

This charter applies to each and every employee and member of management of our organization. We will reinforce our organizational culture through the ongoing pursuit of betterment. We hereby commit to abide by all applicable legal obligations in the country where we pursue our activities. We will, from time to time, undertake to survey the issues relevant to our fields of activity or business sector, involve the necessary resources to enact change, and put efficient management methods in place.
